Focal Theme of the Webinar:

Recent Advances in Environmental Research

Environment has been deteriorating day by day due to immense population pressure and unplanned developmental activities. This increases the task of environmental planners and the policy maker to formulate proper sustainable management strategies. Rapid population growth and urbanization are not only push factors for mounting problems in natural environment but also in socio-economic environment. Hence it is the duty of the researchers and scientists to invent better avenues of environmental management. Geospatial technology has been undertaking revolutionary changes in the last few decades and opened up new avenues for treating environmental issues more exhaustive manner.

The prime objective of the International Webinar is to explore the advances in environmental research addressing both the contemporary environmental issues and methods of handling the issues for catering the socio-ecological well-being.

The deliberations by the eminent resource persons and the researchers will certainly explore new avenues for managing the environment problems.

Sub-themes of the Webinar:

1. Natural hazards
2. Harzards and socio-economic problems
3. Urbanization and environment
4. Population issues and social environment
5. Natural ecosystem degradation
6. Environmental Challenges in mountain, coastal, riparian regions
7. Groundwater depletion and water security
8. COVID issues and physical and social environment

Two-Day International Webinar

on

“Recent Advances in Environmental Research”

September 24-25, 2020
